EDUCATIONAL OBJECTIVES

At the conclusion of this activity, participants should be able to:

• Address the evolving role of targeted therapy in the urologic practice to improve diagnosis, disease management, and outcomes.

• Discuss the potential for the biology of genitourinary cancer to change clinical trial design and improve patient outcomes.

• Devise treatment algorithms and coordinate multidisciplinary care for patients presenting with gender identity issues.

• Review common coding questions,update CPT coding rules, ICD-10 coding, and modifiers in billing to optimize reimbursement.

• Integrate new and modified testing and optimal medical treatment selection for prevention of stone disease and urosepsis.

• Use evidence-based approaches to manage patients presenting with genitourinary cancer.

• Recognize the evolving technology in the sub-specialties of urology.

TARGET AUDIENCE

Healthcare professionals attending this symposium will be engaged through interactive talks, supplemented with visual slide presentations, interactive case presentations, and panel discussions on the latest evidence-based clinical approaches to managing a wide range of urologic conditions.

- Urologists
